# COVID-19 Vaccine

2

I want to protect myself and the people around me from getting sick from Covid-19.

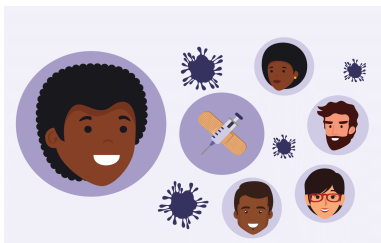

I will get a vaccine. A vaccine is a type of medicine that helps to make sure I am healthy.

Scientists have made vaccines to protect you and other people from getting viruses, like COVID-19.

We already get vaccines for other illnesses like the flu shot. Vaccines make your body stronger.

Doctors think less people will get sick with COVID-19 if more people have the vaccine.

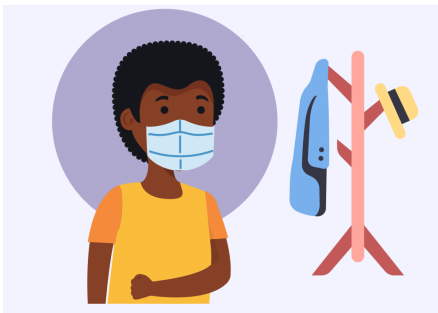

If I have questions about the vaccine, I can ask my staff, my family, or my doctor.

The shot goes in my arm with a needle.

I can listen to music or talk to someone if I am scared.

I will roll up my sleeve or take off my jacket when it is my turn.

I will need to relax and sit still.

I can look away from my arm and close my eyes if I am afraid.

The person giving the shot will wipe my skin clean first.

I may feel a pinch when the needle goes into my arm.

They will cover it with a band-aid, or tape and a cotton ball. Then I am done.

I want to keep everyone healthy and safe from COVID-19.

I will be proud of myself for getting my vaccine!
